My APPs for angular Demo!!

Project 1 :

Creating random servers and assigning names to them dynamically and representing their status with color background ..

Description : Default screen , the ADD server button won't work if the input is empty string
It can dynamically represent output (using String interpolation and data binding both was)

Description : its is generating random serves with different status and the background color changes according to the status of the server (offline : red , online : green)

Project 2: A website for recipes including recipes-list , ingredients , and method to create and add recipes to it (totally dynamic) (still working...)
